The InfoClin EMR Implementation Methodology

The *InfoClin* Electronic Medical Record implementation methodology was designed specifically for small physician offices. Our methodology was developed in an interactive and incremental approach to be extremely efficient. This allows us to explain the approach to physicians easily as well as lowering the communication burden between members of the implementation team, ensuring a consistent and high quality implementation every time.

Selecting the right EMR and achieving efficiencies can be time consuming, risky and more expensive than expected. *InfoClin* has the solution:

- **EMR Implementation, based on:**

- Systematic review of literature
- Fits the culture of medicine

- **Practical and Pragmatic**

- Easy to understand for physicians
- First their world-view not a technology driven one

- **Tried, Tested and Proven**

- Tested in the COMPETE project
- Developed key metrics of adoption – admin and clinical

Bringing Evidence to EMR Implementation

InfoClin worked with McMaster University and a group of physicians to develop a set of tools and methodologies that would improve the success of incorporating information technology into medical offices. Now in its 7th iteration, it has a success rate of over 80% and is built around clinically tested best practices.

***InfoClin* has the exclusive, world-wide license from McMaster University to market its EMR implementation methodology.**

InfoClin Services

- **EMR selection services**

- We can help you develop an EMR selection process to achieve consensus within your team
- Present information on selection options
- Conduct reference checks on vendors

- **Practice Management Consulting**

- We conduct site and needs analysis
- Questions aimed at predicting the potential of failure
- We provide a custom report on your needs

- **Change management training and support**

- Provide change management training
- Assist and assign change management roles
- Assess and manage obstacles and barriers to change

- **EMR implementation project management**

- Manage the entire process of implementing technology in your practice
- Utilize McMaster's proven EMR implementation project management methodology for small clinics

- **Post implementation monitoring and achieving EMR Efficiency**

- Ensure complete utilization of the system
- Ensure tracking to milestones and goals of implementation
- Provide advanced clinical training

- **Post implementation enhanced training and support**

- Provide training and support for advanced use of EMR
- Provide support and facilitation for the sharing of best practices
- Integrate technology into physician workflows

Additional Services

- Business Continuity & Disaster Preparedness
- Privacy and Confidentiality Practice Audits
